

Galvanised Tapers

ADS's galvanised Tapers are spot welded and made as standard from 0.9mm galvanised sheet.

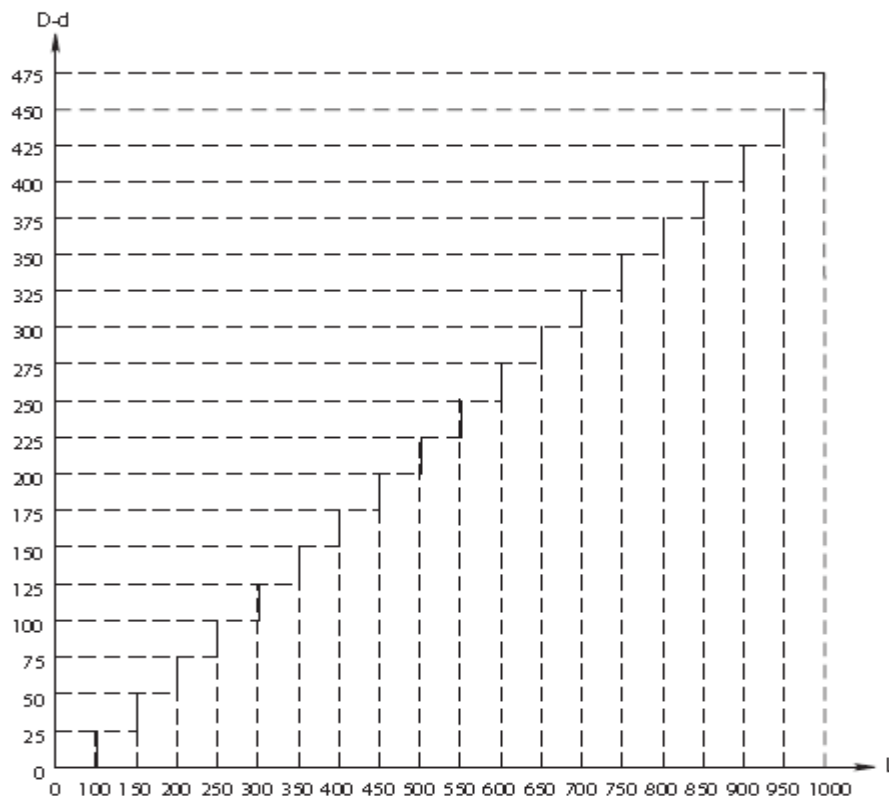

Calculation of the length L of the taper:

The difference between the large and the small diameter (D-d) of the taper is plotted on the vertical axis (y) in the system of co-ordinates. By following the line from this point to the intersection, the length L is read in the corresponding point on the horizontal axis (x) in the system of co-ordinates.

When mounting with Wide Pull Rings, Rapid Pull Rings and flanges the length L is increased by 2 x 50mm.

Diameter: 80-1000mm

Tapers with dimensions other than those listed are available upon request.
